Let's get started

First, make a gitlab acount

Then, create a SSH key, save it in your drive

Install GIT on your machine

git –version

git config –global user.name "Traian"

git config –global user.name

git config –global user.email "traian@tutanota"

git config –global user.email

git config –global –list

Create a demo project on gitlab and add to git

On the CLI

cd C:to project folder

git init

git status

create a text file tex, txt, etc

git add . or git add file.tex

git commit -m "msg: my first commit"

git push -u "url" master
